FAQs

Where can I find the most up-to-date information on bridge conditions?

Does the Bridge ever close to all traffic?

Restrictions

Confederation Bridge Control monitors wind speed 24-hours a day through the use of a real time weather monitoring system installed on the Bridge, in addition to site specific weather bulletins provided by an independent weather service company. Travel restrictions may be enforced when steady winds recorded at the Bridge exceed 70 km/h with gusts consistently exceeding 85 km/h. Restrictions during these times usually only apply to high-sided vehicles, motorcycles, and vehicles with objects in tow.

Am I a High-Sided Vehicle?

At the Confederation Bridge, a high-sided vehicle is defined as any vehicle exceeding 7'2" (2.2 metres) in height, including any fixed or removable racks. As a point of reference, most pick-up trucks, SUVs and vans, including most 15-passenger vans, fall well below this height restriction.

Travel Advisories – Get the App!

Stay informed of changing conditions on the Bridge with our new Confederation Bridge App! Visit your smartphone's app store and download the free application for access to up-to-the minute travel information. Not a smartphone user? Signing up for our email travel advisories is easy and free! Simply click here (</site/sign-up>) to receive information on any potential or current travel restrictions on the Bridge.

Commercial Parking

Safe and convenient staging/parking areas are located on both sides of the Confederation Bridge. During wind events, drivers in Prince Edward Island are encouraged to utilize the rest area located at the corner of Industrial Drive and Dickie Road in Borden-Carleton. This lot is in close proximity to nearby facilities including washrooms, Tim Hortons, and Gateway Village.

In New Brunswick, drivers should exit to the New Brunswick bridge facility located at exit 47 on NB-16E. Washrooms can be found inside the facility.
