Ms. Cheryl Mosher  
Island Regulatory & Appeals Commission  
PO Box 577  
Charlottetown PE C1A 7L1

Dear Ms. Mosher:

**UE22503 – Application for an Order to Approve Stage 1 Rate Design Changes  
Responses to Interrogatories**

Please find attached the Company's responses to interrogatories from Mr. John te Raa with respect to the Company's Application to Approve Stage 1 Rate Design Changes filed with the Commission on May 14, 2021.

An electronic copy will follow.

Yours truly,

MARITIME ELECTRIC

## **Response to Interrogatories**

**UE22503 – Application for an Order to  
Approve Stage 1 Rate Design Changes  
from  
John te Raa**

**Submitted September 23, 2022**

**All our energy.  
All the time.**

IR-1 Please provide an electronic spreadsheet with total hourly system load for January 2021 and January 2022.

***Response:***

An Excel spreadsheet (IR-1 – Attachment 1) has been provided which includes the hourly average load for both Prince Edward Island's hourly load and Maritime Electric's hourly load under a 'January 2021' tab and a 'January 2022' tab.

IR-2 Appendix C Preliminary Residential Class Load Study Results.

Please provide an updated Table-3 based on January 2022 system load data.

***Response:***

The information requested is not readily available. The Residential Load Study results used to support the Rate Design Application were based on 2019 and 2020 customer data. Based on the Company's experience, the requested load study analysis is very labour intensive and, to date, the required analysis to provide an updated Table 3 based on January 2022 load data has not been completed. The Company has no plans to do such an analysis in the short term.

The Company believes there has been no change in circumstances that would result in an updated Table 3 being materially different from what was filed in May 2021. In addition, providing this update for 2022 would not change the fact that the declining second block rate is largely causing the Residential revenue-to-cost ("RTC") ratio to be below the target range.

The Company acknowledges that the declining second block rate does not send the appropriate price signal to Residential customers including farms and electric heat customers. Phasing out the declining second block will take several years to accomplish for the reasons set out in the Application. For these reasons, updating Table 3 with January 2022 results would not change our recommendations for Stage 1 Rate Design Changes or the desired outcome of this regulatory process.

The Application also acknowledges that further adjustments to the Residential class are likely necessary to bring the RTC ratios of all customer classes with the target range of 95/105 and that further recommendations will be provided in a Stage 2 Rate Design Application. The proposals for Stage 2 rate design will consider technological advancements achieved and other relevant data and analysis which the Company expects will include further load study results.
