Subject: Maritime Electric's proposed \$371 million diesel combustion turbine
Date: Tuesday, August 4, 2026 8:53:10 PM

Hello,

Forgive me as I don't have the time to craft a well thought out email about Maritime Electric's proposed \$371 million diesel combustion turbine. What I would like to say is that, given the state of the world; climate change; and the ever-quickening pace we're moving toward climate collapse, mass death and extinctions, and destroying this beautiful planet we call home; that I urge anyone and any organization with power to move us toward a greener future so that we -- and our children and their children -- have a planet to live on. The purchase of a diesel combustion engine is a terrible choice. We need investments in renewable energy only. We must shift away from fossil fuels if we have any chance of a future. PEI could be a leader in renewable energy.

I have a teenager and many young nieces and nephews that I'd really like to leave a better world for. I am also young. I'd like to see a better world. Please reject this proposal or halt it in whatever way you can. Let us invest in renewable energies -- and as such invest in a future where our families and children thrive -- rather than in fossil fuels, only furthering climate destruction, death, and extinction.

Most sincerely,

Dr. Brittany Jakubiec
PEI Resident
