Allowing this proposal to occur would negate/ reverse previous efforts by the PEI Government to become carbon neutral. It would reward the petroleum industry which is already making record profits at this time. It is no longer a reliable supplier as shown by the war in the middle east. . The future financial burden on Islanders is unjustifiable. The fact that this proposal exists is an indication of how our governance systems are failing us. I understand Irving Oil is building a 30 windmill farm in New Brunswick. Are we really so stupid that this can be offered to us by Maritime Electric? Time to act ethically both environmentally and financially. Please!!

Tim McCullough, Retired Health Inspector from PEI Health Department.
