Subject: Maritime Electric Proposal

I wish to voice my comment on Maritime Electric proposal to rebuild the stacks as part of a plan rooted in use of fuel.

A few years ago David Weale, our finest writer, was describing his son's response to the land as they drove around the Island.

(The location may have been the North Shore). David wrote his son was ingesting the land.

The wording suggests relationship with the land

understood in an Aboriginal and biblical sense as earth, air and water-Creation we are all to care for.

Based on the above, I am strongly against the Maritime Electric proposal which will pollute the air even more.

This critical decision should not be solely quantitative based on profit, but qualitative for we are all keepers of our environment.

With regards,

Bernard J. Callaghan B.A. , B.Ed., M.A.
