For a company like Fortis that makes major profits in a year. They do not need to be given more rate increases. A net income of 1.7 billion and you want to give them a rate increase? That makes IRAC part of the problem and not the solution to helping fellow Islanders keep some money in their pockets. Just like barrels of oil are \$80 bucks and we are paying through the roof for gas.. The last time when gas was \$90 a barrel in 2007 we paid 95.0 - 1.15... You make it obvious who you work for and who you don't... I don't want to hear about refining costs. Workers aren't making that much more money...
